The Vayu Fans Document Pack

Every document from the business flow — the SAP screen, the printed output, and the exact table rows it writes

"You have read what a sales order is. Now look at one. The screen, the printout and the table row are three views of the same thing, and seeing all three together is the moment SAP stops being abstract."

How to Read This

Every document below is shown **three ways**, because that is how you will actually meet it on a project:

View	What it is
The SAP screen	What you see in the GUI when you create or display it
The table rows	What SAP actually wrote to the database — the same values, seen through SE16N
The printout (<i>where one exists</i>)	What the customer, vendor or driver receives on paper

The story is one order, followed all the way. Dealer **Balaji Electricals** asks about ceiling fans, orders 200, they get delivered and invoiced. Alongside it, Vayu buys 500 motors from **Sundaram Motors**. Same numbers as *The Business Behind SAP*, so the two documents line up.

Telugu: Prathi document ni **moodu vidhalu ga** chupistunna, endukante project lo neeku ilage kanipistundi: (1) **SAP screen** — GUI lo ela kanipistundo, (2) **table rows** — SAP nijam ga database lo emi raasindo ([SE16N](#) lo chusinattu), (3) **printout** — customer ki, vendor ki, driver ki ye kaagitam veltundo.

Katha okate: dealer **Balaji Electricals** fans gurinchi adigi, 200 order chestadu, avi delivery ayi, bill vestaru. Pakkana Vayu **Sundaram Motors** nunchi 500 motors konatundi. *The Business Behind SAP* lo unna **ade numbers** — kabatti rendu docs kalisi chadavachu.

Two honest notes. These are **drawings**, not screenshots — real SAP screenshots are copyrighted, so every screen here is redrawn to scale with the real field names and layout. And your system will differ in detail: field positions, tab names and document types depend on configuration. The **field names and table names are correct everywhere**; treat the pixel layout as a guide.

Part A — The Selling Documents (O2C)

A1. Inquiry — VA11

What it is: The customer asks "do you make a 1200mm fan, and roughly what would 200 cost?" No commitment on either side. Many companies skip this entirely.

What it wrote to the database:

VBAK – Sales Document: Header Data						
MANDT	VBELN	AUART	VBTYP	KUNNR	VKORG	NETWR
100	0010000055	IN	A	0000200145	1000	290000.00

VBAP – Sales Document: Item Data						
MANDT	VBELN	POSNR	MATNR	KWMENG	WERKS	NETWR
100	0010000055	000010	FAN-CEIL-1200	200	1000	290000.00

The two fields to notice: `AUART` = `IN` is the **document type** (inquiry). `VBTYP` = `A` is the **document category**, which is what `VBFA` uses to link documents later. An inquiry, a quotation and a sales order all sit in `VBAK` — only these two fields tell them apart.

Telugu: Inquiry ante customer "ee fan chestara, 200 ki entha avutundi?" ani **adagatam** — evariki commitment ledi. Chala companies deenne **vadilesthaaru**.

Chudalsina rendu fields: `AUART` = `IN` ante **document type** (inquiry). `VBTYP` = `A` ante **document category**. Inquiry, quotation, sales order — **moodu kuda `VBAK` table lo ne** untai; ee rendu fields matrame vaatini veru chestai.

A2. Quotation — VA21

What it is: Vayu's **formal price offer**, valid until a date. This is *our* offer to a customer — the opposite direction from a supplier quotation in P2P.

What it wrote:

VBAK — Sales Document: Header Data							
VBELN	AUART	VBTYP	KUNNR	VKORG	VTWEG	SPART	NETWR
0020000088	QT	B	0000200145	1000	10	00	290000.00

VKORG / **VTWEG** / **SPART** together are the sales area — sales organisation 1000, distribution channel 10 (Dealer), division 00 (Fans). Every sales document must name one, and pricing and output determination both depend on it.

The button worth knowing: "Create with reference". Rather than retyping, you press it and give the inquiry number — SAP copies the customer, materials and quantities into the quotation and records the link in **VBFA**. The same button turns a quotation into a sales order. **That copy-with-link is the mechanism behind the whole document chain.**

Telugu: Quotation ante manam customer ki ichhe **official price offer**, oka date varaku valid. (Konadam lo quotation ni **supplier** istadu — direction addam.)

VKORG / **VTWEG** / **SPART** moodu kalipi **sales area** — sales org 1000, channel 10 (dealer), division 00 (fans). Prathi sales document ki idi **tappanisari**.

Mukhyamaina button — "Create with reference". Malli antha type cheyyakunda, inquiry number ichhi ee button nokkithe, SAP customer, material, quantity anni **copy chesi**, **VBFA** lo **link kuda raastundi**. Ade button tho quotation nunchi sales order kuda create avutundi. **Document chain antha ee copy-with-link valla ne** pani chestundi.

A3. Sales Order — VA01

What it is: Balaji accepts. **The central O2C document** — the delivery, the invoice and the accounting entry all trace back to this number.

What it wrote — three tables, not one:

VBAK — header							
VBELN	AUART	VBTYP	KUNNR	VKORG	ERDAT	NETWR	WAERK
5000000123	OR	C	0000200145	1000	10.09.2026	290000.00	INR

VBAP — items							
VBELN	POSNR	MATNR	KWMENG	VRKME	WERKS	NETWR	PSTYV
5000000123	000010	FAN-CEIL-1200	200	EA	1000	290000.00	TAN

VBEP — schedule lines (the confirmed date)						
VBELN	POSNR	ETENR	EDATU	WMENG	BMENG	meaning
5000000123	000010	0001	12.09.2026	200	200	requested 200, confirmed 200

Check		Where you see it
Availability check (ATP)		The Confirmed column: 200 on 12.09. If stock were short it would confirm a later date or a partial quantity
Pricing		Net price 1,450.00, derived from the price list and the dealer's discount
Credit check		Invisible when it passes. If Balaji owed too much, the status bar would say the order is blocked

Telugu: Sales Order (`VA01`) = O2C lo **gundekaya**. Delivery, invoice, accounting entry — anni ee number ni reference chestai.

Moodu tables lo padutundi: **VBAK** (header — customer, date, motham value), **VBAP** (items — material, quantity), **VBEP** (**schedule lines** — eppudu deliver cheyyagalamo aa confirmed date).

Save cheyyagane moodu checks automatic ga jarugutai: (1) **ATP** — stock unda? Screen lo **Confirmed** column lo kanipistundi. (2) **Pricing** — price list nunchi rate. (3) **Credit check** — dealer ekkuva baaki unte order **block** avutundi.

A4. Delivery — VL01N

What it is: The warehouse's instruction: "these 200 fans, from plant 1000, leaving through shipping point 1000, on 13 September." Stock is now **reserved** but has not yet left.

Shipping point 1000 Delivery type LF

Planned GI date 13.09.2026 Total weight 960.000 KG

Item	Material	Deliv. qty	Un	Picked qty	Plnt	SLoc	Batch
10	FAN-CEIL-1200	200	EA	200	1000	FG01	—

Outbound Delivery 0080000456 has been saved S4H 100 NIKHIL OVR

What it wrote:

LIKP — Delivery: Header						
VBELN	LFART	VSTEL	KUNNR	LFDAT	WADAT_IST	BTGEW
0080000456	LF	1000	0000200145	13.09.2026	(empty – not yet issued)	960.000
LIPS — Delivery: Item						
VBELN	POSNR	MATNR	LFIMG	WERKS	LGORT	VGBEL
0080000456	000010	FAN-CEIL-1200	200	1000	FG01	5000000123

Look at `LIPS-VGBEL` — it holds `5000000123`, the sales order this delivery came from. That single field is how the chain stays connected, and it is also what feeds `VBFA`. `VGBEL` = *Vorgängerbeleg*, "**preceding document**".

And notice `WADAT_IST` **is empty**. That is the *actual* goods-issue date. It stays blank until PGI in A5 — which is the cleanest way to check whether a delivery has actually shipped.

Telugu: Delivery ('VL01N') ante warehouse ki instruction: "ee 200 fans, plant 1000 nunchi, shipping point 1000 gunda, 13th na bayataki". Stock ippudu **reserve matrame** ayindi — inka taggaledu.

Rendu fields chudu:

— `LIPS-VGBEL` lo `5000000123` undi — ante **e sales order nunchi ee delivery vachindo**. Chain kalisi undedi ee field valla ne. (`VGBEL` = German *Vorgangerbeleg* = "mundu unna document".)

— `LIKP-WADAT_IST` **khali ga** undi — adi **nijam ga samanu vellina date**. PGI ayye varaku adi khali ne. Delivery nijam ga velli poyinda ledaa ani telusukovadaniki **idi ne best check**.

A5. Post Goods Issue — VL02N

What it is: The single most important click in O2C. **PGI means the goods have legally left the company.** Stock drops, and the cost hits the profit and loss account — in the same second, with no separate finance entry typed by anyone.

Outbound deliv. 0080000456

Actual GI date 13.09.2026

Item	Material	Deliv. qty	Picked	Mvt type	Plnt	SLoc	Status
10	FAN-CEIL-1200	200	200	601	1000	FG01	Complete

Outbound Delivery 0080000456 has been saved — goods issue posted

S4H | 100 | NIKHIL | OVR

PGI creates two brand-new documents that nobody typed:

MATDOC – the material document (stock movement)						
MBLNR	BUDAT	BWART	MATNR	MENGE	WERKS	SHKZG
4900001234	13.09.2026	601	FAN-CEIL-1200	200	1000	H (credit / minus)

ACDOCA – the accounting document					
BELNR	BUKRS	RACCT	Description	DRCRK	Amount
4900000078	1000	500000	Cost of Goods Sold	S (debit)	2,36,000.00
4900000078	1000	310000	Inventory – Finished Goods	H (credit)	2,36,000.00

Read that carefully, because it is the whole idea of an ERP in six rows. One button press in a *logistics* screen just wrote a *stock* movement and a *finance* posting. The ₹2,36,000 is the **cost** of the fans (200 × ₹1,180 standard price), not the selling price — revenue does not appear until the invoice in A6.

Before PGI	After PGI
Stock in 1000 / FG01 : 340	Stock: 140
LIKP-WADAT_IST : empty	LIKP-WADAT_IST : 13.09.2026
No accounting entry	COGS debited, inventory credited
The fans are Vayu's	The fans are Balaji's goods in transit

Telugu: PGI (Post Goods Issue) — O2C lo **ati mukhyamaina click**. Ee kshanam lo samanu **legal ga company nunchi bayataki vellindi**.

Okka button nokkite rendu kotta documents puttai, evaru type cheyyakunda:

— **Material document** (**MATDOC**), movement type **601** — stock 340 nunchi **140** ki taggindi.

— **Accounting document** (**ACDOCA**) — **COGS Dr / Inventory Cr**, ₹2,36,000.

Jaagratha: aa ₹2,36,000 anedi fans yokka **cost** ($200 \times ₹1,180$), **ammuna rate kaadu**. Revenue (₹2,90,000) invoice daggara ne vastundi.

Idi ne ERP yokka motham idea — **logistics screen** lo okka click, kani **stock mariyu finance** rendintlo entry padindi.

A6. Invoice — VF01

What it is: The legal invoice to Balaji. Now — and only now — **revenue** is recognised and Balaji formally owes Vayu money.

Billing doc. 0090000789 Billing type F2

Payer 200145 Balaji Electricals, Hyderabad

Billing date 14.09.2026 Net value 2,90,000.00 INR

Item	Material	Billed qty	Un	Net price	Net value	Tax
10	FAN-CEIL-1200	200	EA	1,450.00	2,90,000.00	52,200.00

Total incl. tax 3,42,200.00 INR

Document 0090000789 has been saved S4H 100 NIKHIL OVR

What it wrote:

VBRK – Billing: Header						
VBELN	FKART	VBTP	KUNRG	FKDAT	NETWR	WAERK
0090000789	F2	M	0000200145	14.09.2026	290000.00	INR
VBRP – Billing: Item						
VBELN	POSNR	MATNR	FKIMG	NETWR	AUBEL	VGBEL
0090000789	000010	FAN-CEIL-1200	200	290000.00	5000000123	0080000456
ACDOCA – the accounting document						
BELNR	RACCT	Description	DRCRK	Amount		
1000000456	140000	Trade Receivables – Balaji	S (debit)	3,42,200.00		
1000000456	400000	Sales Revenue – Fans	H (credit)	2,90,000.00		
1000000456	175000	GST Output Payable	H (credit)	52,200.00		

VBRP carries two references — **AUBEL** points back to the sales order and **VGBEL** to the delivery. That is why the document flow in C1 can show you the whole tree from any one of them.

Telugu: Invoice ('VF01') — ippudu matrame **revenue** (₹2,90,000) lekka loki vastundi, mariyu Balaji official ga **₹3,42,200 baaki** padathadu (GST 18% kalipi).

Accounting entry moodu lines: Customer baaki **Dr ₹3,42,200** / Sales revenue **Cr ₹2,90,000** / GST payable **Cr ₹52,200**.

VBRP lo **rendu references** unnai — **AUBEL** = sales order, **VGBEL** = delivery. Anduke e document nunchi ayina **motham chain** chudochu.

A7. The Printed Outputs — Delivery Note and Tax Invoice

What they are: The screens above are what *you* see. These are what the **driver** and the **customer** receive. In SAP they are produced by **output determination** — configuration decides which form prints, when, and to which printer or e-mail.

The delivery note — travels with the truck:

VAYU FANS PVT LTD Plot 42, IDA Balanagar, Hyderabad 500037 · GSTIN 36AABCV1234F1Z5	DELIVERY NOTE No. 0080000456 · Date 13.09.2026												
SHIP TO Balaji Electricals 18-2-44, Begum Bazar Hyderabad 500012 Customer 200145	DESPATCH DETAILS Sales order: 5000000123 Your ref: BAL-PO-4471 Shipping point: 1000 Vehicle: TS09 UB 4412												
<table><tr><th>ITEM</th><th>MATERIAL</th><th>DESCRIPTION</th><th>QTY</th><th>UNIT</th><th>GROSS WT</th></tr><tr><td>10</td><td>FAN-CEIL-1200</td><td>Ceiling Fan 1200mm White</td><td>200</td><td>EA</td><td>960.000 KG</td></tr></table>		ITEM	MATERIAL	DESCRIPTION	QTY	UNIT	GROSS WT	10	FAN-CEIL-1200	Ceiling Fan 1200mm White	200	EA	960.000 KG
ITEM	MATERIAL	DESCRIPTION	QTY	UNIT	GROSS WT								
10	FAN-CEIL-1200	Ceiling Fan 1200mm White	200	EA	960.000 KG								
Goods received in good condition — receiver signature _____													
Page 1 of 1													

Notice what is *not* on it: no prices. A delivery note proves *what was sent*, not what it costs. The driver and the receiving storeman have no business seeing the commercial terms. That separation is deliberate, and it is configured, not coded.

The tax invoice — goes to the customer's accounts department:

VAYU FANS PVT LTD Plot 42, IDA Balanagar, Hyderabad 500037 · GSTIN 36AABCV1234F1Z5	TAX INVOICE No. 0090000789 · Date 14.09.2026

<table><tr><th>ITEM</th><th>DESCRIPTION</th><th>HSN</th><th>QTY</th><th>RATE</th><th>AMOUNT</th></tr><tr><td>10</td><td>Ceiling Fan 1200mm White (FAN-CEIL-1200)</td><td>8414</td><td>200 EA</td><td>1,450.00</td><td>2,90,000.00</td></tr></table>		ITEM	DESCRIPTION	HSN	QTY	RATE	AMOUNT	10	Ceiling Fan 1200mm White (FAN-CEIL-1200)	8414	200 EA	1,450.00	2,90,000.00
ITEM	DESCRIPTION	HSN	QTY	RATE	AMOUNT								
10	Ceiling Fan 1200mm White (FAN-CEIL-1200)	8414	200 EA	1,450.00	2,90,000.00								
Taxable value 2,90,000.00													
CGST 9% 26,100.00													
SGST 9% 26,100.00													
Total payable INR 3,42,200.00													

How these get built, and where you come in:

	Standard SAP	Vayu wants its own layout
The form	A delivered Smart Form / Adobe Form	You build one — a Smart Form (SMARTFORMS) or Adobe Form (SFP)
When it prints	Output determination config — NACE	Configured, not coded
Where it goes	Printer, e-mail, EDI	Configured
The data	Read from LIKP / LIPS or VBRK / VBRP	You write the driver program that reads it

This is the "F" in RICEF, made concrete. Almost every SAP customer wants its own invoice and delivery-note layout with its own logo, GST wording and terms. That is a **Forms** task, it lands on an ABAP developer, and it is one of the most common first assignments a fresher gets.

Telugu: Paina unna screens **neeku** kanipistai. Ee rendu **driver ki mariyu customer ki** velle kaagitalu. Vaatini SAP **output determination** (config, **NACE**) dwara print chestundi.

Delivery Note lo price undadu — enduku ante adi "emi pampamo" ani matrame cheputundi. Driver ki, godown lo teesukune vaadiki **rate telisi avasaram ledi**. Idi kaavalane chesina separation, mariyu adi **config** lo ne.

Tax Invoice lo GST, HSN code, payment terms anni untai — adi customer accounts department ki veltundi.

Ikkade nee pani vastundi: deadaapu prathi company tana sonta layout kavali antundi — sonta logo, sonta GST wording. Adi **Smart Form** leda **Adobe Form** — RICEF lo **"F"**. Fresher ki vachhe **ati common modati task** idi.

Part B — The Buying Documents (P2P)

B1. Purchase Requisition — ME51N

What it is: An **internal** request — "we need 500 motors by 15 September". The supplier never sees it. Most requisitions on a real system are not typed by anyone: **MRP creates them automatically** when it works out what is short.

NIKHIL

OVR

What it wrote — one table only:

EBAN – Purchase Requisition (item level, no separate header table)

BANFN	BNFPO	MATNR	MENGE	MEINS	LFDAT	WERKS	EKGRP
0010000234	00010	MOTOR-48W	500	EA	15.09.2026	1000	P01

The exception worth remembering. Every other document in this pack has a header table *and* an item table. The purchase requisition has **only EBAN** — it is item-level from the start, because each line can have its own delivery date, plant and buyer. When someone asks "what is the header table for a PR?", the correct answer is "there isn't one".

Telugu: Purchase Requisition ante **lopali** request — "15th ki 500 motors kavali". Supplier ki idi **velladu**. Nijamaina system lo veetini deadaapu **evaru type cheyyaru** — **MRP run** emi takkuvu undo lekkinchi **automatic ga** create chestundi.

Gurthu pettuko: ee pack lo migilina prathi document ki **header table + item table** undi. PR ki matram **okate table** — **EBAN** . Header table **ledu**, endukante prathi line ki sonta date, plant, buyer undochu. Interview lo "PR header table enti?" ani adigite, sariyaina jawab "**ledu**".

B2. Purchase Order — ME21N

What it is: The **legally binding order** sent to Sundaram Motors. The central P2P document — the goods receipt and the invoice both check themselves against it.

What it wrote:

EKKO – Purchasing Document: Header						
EBELN	BSART	LIFNR	EKORG	EKGRP	WAERS	BEDAT
4500000456	NB	0000100234	1000	P01	INR	08.09.2026
EKPO – Purchasing Document: Item						
EBELN	EBELP	MATNR	MENGE	NETPR	WERKS	LGORT
4500000456	00010	MOTOR-48W	500	840.00	1000	RM01
EKET – Delivery schedule lines						
EBELN	EBELP	ETENR	EINDT	MENGE	meaning	
4500000456	00010	0001	15.09.2026	500	all 500 due on one date	

The tab to remember is **Purchase order history** . It is empty right now. After the goods receipt and the invoice it fills up from table **EKBE** , and that history is exactly what the three-way match reads.

Telugu: **Purchase Order** (`ME21N`) = supplier ki velle **official, legal order**. P2P lo **madhya bindhuvu** — goods receipt, invoice rendu deenne chusi sari chusukuntai.

Moodu tables: **EKKO** (header — vendor, date, currency), **EKPO** (items — material, quantity, rate), **EKET** (**schedule lines** — eppudu deliver cheyyalo).

Mukhyamaina tab: **"Purchase order history"**. Ippudu adi **khali**. Goods receipt, invoice vachaka adi **EKBE** table nunchi nindutundi — **three-way match chadivedi ade history ne**.

B3. The Printed Purchase Order

What it is: What Sundaram Motors actually receives — by post, e-mail or EDI. Same data as the screen above, laid out as a commercial document.

VAYU FANS PVT LTD

DELIVER TO
Vayu Fans Pvt Ltd — Plant 1000
Gate 2, Raw Material Stores (RM01)
IDA Balanagar, Hyderabad 500037
Buyer: P01 · Terms: 30 days net

ITEM	MATERIAL	DESCRIPTION	QTY	RATE	VALUE	DELIVERY BY
10	MOTOR-48W	Fan Motor 48W Single Phase	500 EA	840.00	4,20,000.00	15.09.2026
Basic value					4,20,000.00	
IGST 18%					75,600.00	
Order value					INR 4,95,600.00	

Quote our PO number on all invoices and delivery documents · Subject to Hyderabad jurisdiction

For Vayu Fans Pvt Ltd

One line on that form does real work: "Quote our PO number on all invoices." When Sundaram's invoice arrives with **4500000456** on it, the accounts clerk can enter it in **MIRO** against the PO and the three-way match runs by itself. Without the reference, somebody has to hunt for the right order by hand.

Telugu: Idi **Sundaram Motors ki nijam ga velle kaagitam** — post, email leda EDI dwara. Screen lo unna **ade data**, kani commercial document laaga.

Andulo okka line nijam ga pani chestundi: "maa PO number ni anni invoices meeda raayandi". Supplier invoice meeda **4500000456** unte, accounts vaadu **MIRO** lo PO ki against enter cheyyagaladu, mariyu **three-way match automatic ga** nadustundi. Aa number lekapothe, sariyaina order ni **chetitho vetakali**.

B4. Goods Receipt — MIGO

What it is: The truck is at the gate with 500 motors. Stores records it against the PO. **Stock goes up, and finance posts by itself.**

Material document 5000012345 posted

S4H | 100 | NIKHIL | OVR

What it wrote — three separate things:

MATDOC – the material document						
MBLNR	BUDAT	BWART	MATNR	MENGE	LGORT	EBELN
5000012345	15.09.2026	101	MOTOR-48W	500	RM01	4500000456

EKBE – PO history (this is what the three-way match reads)					
EBELN	EBELP	VGABE	BELNR	MENGE	meaning
4500000456	00010	1 (goods receipt)	5000012345	500	500 of the 500 ordered have arrived

ACDOCA – the accounting document				
BELNR	RACCT	Description	DRCRK	Amount
5000000091	300000	Inventory – Raw Material	S (debit)	4,20,000.00
5000000091	191100	GR/IR Clearing Account	H (credit)	4,20,000.00

The GR/IR account is worth understanding, because beginners always ask about it. At this moment Vayu **has the motors but has not received a bill**. So the debt cannot yet be booked against Sundaram Motors by name. It sits in a holding account — **GR/IR (Goods Receipt / Invoice Receipt)** — until the invoice arrives in **MIRO** and moves it to the vendor. If a GR/IR balance is still sitting there months later, it means goods arrived and no invoice ever came, or the reverse. **Clearing GR/IR is a real month-end job.**

Step	Stock	Accounting
PO created	no change	nothing — a PO is only a commitment
Goods receipt	+500 in RM01	Inventory Dr / GR/IR Cr

Step	Stock	Accounting
Invoice verified (MIRO)	no change	GR/IR Dr / Vendor Cr
Payment (F110)	no change	Vendor Dr / Bank Cr

Telugu: Goods Receipt (`MIGO`, movement type 101) — truck vachindi, stores 500 motors ni PO ki against record chestundi. **Stock penchutundi, mariyu FI entry automatic ga** padutundi.

Moodu vishayalu raastundi: (1) **Material document** (**MATDOC**) — stock movement. (2) **EKBE PO history** — "500 lo 500 vachai" ani. **Three-way match chadivedi idi ne.** (3) **Accounting document.**

GR/IR account ante emiti? Ee kshanam lo Vayu daggara **motors unnai kani bill raledu.** Kabatti "Sundaram Motors ki itanta baaki" ani inka raayalemu. Anduke aa dabbu **GR/IR ane madhyavarthi account** lo aagi untundi. Invoice **MIRO** lo vachaka, adi vendor account loki veltundi. **Nelalu gadichina GR/IR lo dabbu aagi unte** — samanu vachindi kani bill raledu (leda addam). Daanni clear cheyyadam **month-end lo nijamaina pani.**

Part C — Seeing Them Linked

C1. The Document Flow

What it is: Every document you have just seen stored a reference to the one before it. SAP keeps those links in table **VBFA** , and shows them as a tree from any document in the chain.

Document Flow			
Document flow Edit Goto Environment System Help			
/nVA03 ✓ Display document Status overview ←			
Document	Number	On	Status
Inquiry	0010000055	01.09.2026	Completed

└ Accounting document	1000000456	14.09.2026	Cleared
Double-click any line to jump into that document			
S4H 100 NIKHIL OVR			

What that screen is really telling you. Seven documents. Five departments — sales, warehouse, stores, billing, accounts. Fourteen days. **Nobody re-typed anything**, and every document knows its parents and its children. That is the thing a company is actually buying when it buys an ERP.

The rows behind it:

VBFA — Sales Document Flow					
VBELV (preceding)	VBELN (subsequent)	POSNV	POSNN	VBTP_N	meaning
0010000055	0020000088	000010	000010	B	inquiry → quotation

0020000088	5000000123	000010	000010	C	quotation → order
5000000123	0080000456	000010	000010	J	order → delivery
0080000456	4900001234	000010	000001	R	delivery → goods movement
0080000456	0090000789	000010	000010	M	delivery → invoice

The interview question this answers completely. "How would you find out whether a sales order has been invoiced?" — "Open VA03 and check the document flow, which reads VBFA. In code I would select from VBFA where VBELV is the order number and VBTYP_N is 'M'." You can now say that and mean it.

Telugu: Nuvvu ippudu chusina **prathi document** daani mundu dani reference ni daachukundi. SAP aa links anni VBFA table lo unchutundi, mariyu chain lo **e document nunchi ayina** motham tree ni chupistundi.

Aa screen nijam ga cheppedi idi: Edu documents, aidu departments, padnalugu rojulu — evaru dennini malli type cheyyaledu, mariyu prathi document ki tana **talli-pillalu** telusu. Company ERP koneppudu nijam ga konedi **ee okka screen ne.**

C2. Every Document and Its Tables

The whole pack on one page. Pin this beside your practice system.

#	Document	T-code	Header table	Item table	Key field	Type field
1	Inquiry	VA11	VBAK	VBAP	VBELN	AUART = IN , VBTYP = A
2	Quotation (sales)	VA21	VBAK	VBAP	VBELN	AUART = QT , VBTYP = B
3	Sales order	VA01	VBAK	VBAP + VBEP	VBELN	AUART = OR , VBTYP = C
4	Delivery	VL01N	LIKP	LIPS	VBELN	LFART = LF , VBTYP = J
5	Goods issue (PGI)	in VL02N	MATDOC	MATDOC	MBLNR	BWART = 601
6	Invoice	VF01	VBRK	VBRP	VBELN	FKART = F2 , VBTYP = M
7	Purchase requisition	ME51N	none	EBAN	BANFN	BSART = NB
8	Purchase order	ME21N	EKKO	EKPO + EKET	EBELN	BSART = NB
9	Goods receipt	MIGO	MATDOC	MATDOC	MBLNR	BWART = 101
10	PO history	—	—	EKBE	EBELN	VGABE 1 = GR, 2 = invoice

#	Document	T-code	Header table	Item table	Key field	Type field
11	Vendor invoice	MIRO	RBKP	RSEG	BELNR	—
12	Accounting document	FB03	BKPF	ACDOCA	BELNR	—
13	Document links	—	—	VBFA	VBELV / VBELN	VBTYP_N

Three patterns to take away, and they cover most of SAP:

Pattern	What it means
Header + item	Almost every document splits into one header row and many item rows, joined by the document number. K at the end of a table name usually means <i>Kopf</i> (header), P means <i>Position</i> (item)
A type field decides behaviour	AUART , LFART , FKART , BSART , BWART — one small code that tells SAP which rules to apply. This is configuration, not code
A reference field links the chain	VGBEL on a delivery, AUBEL on a billing item, EBELN on a material document — plus VBFA holding the links explicitly

Telugu: Ee page ni print chesi practice system pakkana pettuko.

Moodu patterns gurthu unchukunte SAP lo chala varaku ardham avutundi:

1. **Header + Item** — deadaapu prathi document okka header row + chala item rows. Table peru chivara **K** unte header, **P** unte item.
2. **Type field** — **AUART** , **LFART** , **FKART** , **BSART** , **BWART** . Ee chinna code **ye rules apply avvalo** cheputundi. Idi **config, code kaadu**.
3. **Reference field** — **VGBEL** , **AUBEL** , **EBELN** mariyu **VBFA** — ivi **chain ni kalipe** fields.

What to do with this pack this week. Open **SE16N** , type **VBAK** , and find any sales order in your practice system. Then look up its items in **VBAP** , its delivery in **LIKP** using **VBFA** , and its invoice in **VBRL** . You will have walked a real document chain by hand, in the database, in about fifteen minutes — and after that, nothing your tutor opens will look unfamiliar.

Companion to **The Business Behind SAP** (the story) and **T-Codes & Tables** (the reference). This one is the pictures.
